## The Hiring Team

Techsavanna Technology Limited

Nairobi, Kenya

## Re: Front End Developer

Dear Hiring Team,

I am applying for the Front End Developer role at Techsavanna. Your posting asks for someone to implement a complete user interface across mobile and desktop web, with a focus on performance — that sentence describes what I do every day.

I am currently Lead Front End Engineer at Fingo Africa, where I own the front-end architecture for stablecoin wallets, on/off-ramp interfaces, cross-border transfer flows and KYC onboarding. These are regulated financial screens: a mis-rendered balance or a form that loses state mid-verification is not a cosmetic bug, it is a compliance incident. That standard of care is the same one Savanna360, WorkWise HRM and SavannaPay demand, and it is the standard I would bring to your team. I ship to two surfaces in parallel — Flutter on mobile, Next.js on web — and hold a single interaction language across both, so building one interface that has to work properly on a phone and on a desktop is familiar territory rather than a new constraint.

I should be straightforward about one thing. My production depth is in TypeScript, React, Next.js and Vue rather than Angular. What I bring instead is the thing Angular actually rests on: strong TypeScript, component architecture, reactive state, dependency-injected services and a genuine feel for change detection and render cost. My record on picking up unfamiliar stacks is evidence, not a promise — I shipped production Flutter at Bonded in London, wrote Rust and Motoko to reach the WCHL Global Finale, and built a Rust/Tauri desktop application now used by 1,500 people. I would expect to be reviewing Angular pull requests within weeks, not months.

Beyond writing code, I have spent two years raising the quality of other people's front-end work: 500+ code reviews and 100+ live sessions at Power Learn Project Africa, where I also extended their LMS in Next.js and React. For a company running ISO 9001:2015 and delivering across seven countries, an engineer who improves the codebase around them is worth more than one who only adds to it.

My resume is attached, and my portfolio at [dedan-okware.vercel.app](https://dedan-okware.vercel.app) links the live work and source for everything referenced here. I would welcome the chance to talk about what your front-end team is building.

Thank you for your time and consideration.

Sincerely,

**Dedan Okware**
