

# DEDAN OKWARE

Front End Engineer — TypeScript · React · Next.js · Vue · Flutter

softengdedan@gmail.com · Nairobi, Kenya · github.com/okwaredevnest · linkedin.com/in/softcysec-dedan-okware · dedan-okware.vercel.app

## PROFESSIONAL SUMMARY

Front End Engineer with 3+ years building production user interfaces for financial services, enterprise platforms and developer tooling. Currently Lead Front End Engineer at Fingo Africa, owning front-end architecture for stablecoin wallets, cross-border transfer flows and KYC onboarding across web and mobile — the same regulated, high-stakes UI territory as enterprise finance, HR and payments products. Deep TypeScript practitioner across component-driven frameworks (React, Next.js, Vue, Flutter), shipping responsive desktop-and-mobile interfaces where performance is a requirement rather than a nice-to-have. Equally comfortable defining front-end standards, running code review at scale, and owning the release pipeline to production.

## CORE COMPETENCIES

**Languages** · TypeScript · JavaScript (ES6+) · HTML5 · CSS3 · Dart · Python · Golang · Rust

**Front End** · React · Next.js · Vue.js · Flutter · TailwindCSS · Material-UI · Redux · Framer Motion · WebSockets · Responsive & Mobile-First Design · Component Architecture · Design Systems

**Quality & Performance** · Web Performance Optimisation · Accessibility (WCAG) · Cross-Browser Testing · Code Review · Front-End Testing Frameworks · Front-End Engineering Standards

**Integration** · REST APIs · GraphQL · gRPC · Node.js · Express.js · Django · FastAPI · PostgreSQL · MongoDB · MySQL · Redis

**Delivery** · Git · CI/CD · GitHub Actions · Docker · Vercel · AWS · Azure · Nginx · Linux · n8n Automation

## PROFESSIONAL EXPERIENCE

### Lead Front End Engineer — Fingo Africa

Feb 2026 – Present · Nairobi, Kenya · Hybrid, Full-time

- Own front-end architecture for Fingo Global — stablecoin wallets, on/off-ramp interfaces, cross-border transfer flows and KYC/onboarding screens used for regulated financial transactions.
- Ship production interfaces on two surfaces in parallel: Flutter mobile applications and Next.js web experiences, keeping a single visual and interaction language across both.
- Define and enforce front-end engineering standards, code review practice and testing frameworks across the engineering team.
- Translate product specifications from the Stablecoin Product Lead and Engineering Lead into robust, performant UI, working directly with design to deliver pixel-accurate, accessible and fast interfaces.
- Own the front-end deployment pipeline, CI/CD and release management for both mobile and web.

### Software Engineer & Instructor — Power Learn Project Africa

Oct 2024 – May 2026 · Nairobi, Kenya · Consultancy

- Extended the organisation's LMS platform with new front-end features using Next.js, React.js and Strapi CMS, backed by Golang services — a long-lived enterprise learning product serving a continent-wide user base.
- Performed 500+ code reviews and ran 100+ live coding sessions, raising front-end code quality across the engineering and student base to a 95% project completion rate.
- Trained and graduated 9,000+ students in full-stack development (React.js, Node.js, Express.js, MongoDB) across 3 cohorts in 2025, and authored 15+ capstone projects adopted as the academy standard.

- Automated internal SOPs and LMS workflows with a self-hosted n8n server and 15+ webhook integrations, cutting manual operations by 60%; containerised deployment with Docker to improve release velocity.

## Software Engineer (Contract) — Bonded · London, United Kingdom

Apr 2025 – Jul 2025 · Remote

- Built internal mobile systems in Flutter to streamline document verification and partner communication for a UK visa application platform.
- Delivered document-heavy, compliance-sensitive interfaces where correctness and auditability of user input were non-negotiable.
- Collaborated across 3 time zones with a distributed cross-functional team, delivering to schedule.

## Freelance Software Engineer

Apr 2023 – Mar 2025 · Kenya · Remote

- Delivered 20+ full-stack web applications and cross-platform mobile apps, specialising in React, TypeScript and Next.js on the front end.
- Built and integrated production APIs serving 50,000+ monthly users, owning the full path from interface to data layer. Sustained a 100% client satisfaction rate, with 70% repeat business.

## Open Source Developer & Maintainer

Jan 2023 – Present · Remote

- **Gitok** — Git productivity CLI with 35+ commands, adopted by 2,000+ developers across 40+ countries.
- **U-Download** — cross-platform desktop application with a React + TypeScript interface on a Rust/Tauri core, trusted by 1,500+ users.
- Maintain 10+ repositories, processing 500+ issues and pull requests.

---

## SELECTED PROJECTS

### OHMS 2.0 — Autonomous AI Agent Platform · React 19, TypeScript, Rust, Internet Computer

Award-winning platform built over 4 months. Designed and built the complete React 19 + TypeScript front end for natural-language agent composition. **WCHL 2nd Place — National (Kenya) and Regional (Africa); Global Finalist.**

### U-Download — Cross-Platform Media Downloader · React, TypeScript, Tauri, Rust

Desktop application with real-time progress, live speed/ETA telemetry and per-second video trimming. Native packaging for Linux, Windows and macOS. 1,500+ users.

### Gitok — Developer Productivity CLI · Shell, Bash, Fish, GitHub Actions

35+ Git commands with auto-update via semantic versioning, interactive cheatsheets and a fully automated CI/CD release pipeline. 2,000+ developers across 40+ countries.

---

## CERTIFICATIONS

- **Google Cybersecurity Professional Certificate** — Coursera, 2023
- **ICP TypeScript Smart Contract 101** — Dacade.org, 2024
- **ICP Rust Smart Contract 101** — Dacade.org, 2024

---

## EDUCATION

**Software Engineering & Computer Science** — specialised in full-stack development, front-end architecture and distributed systems, with continuous professional development through certification and applied project work.
